Tools Used In This Project :

Helps in buliding the project

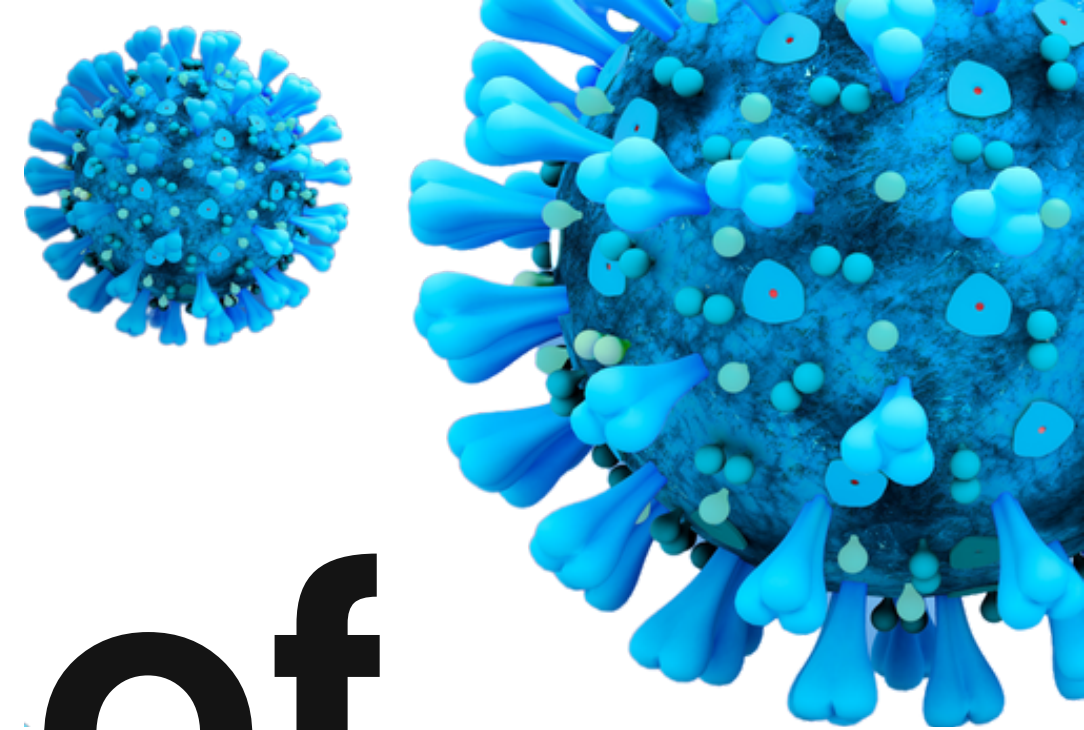

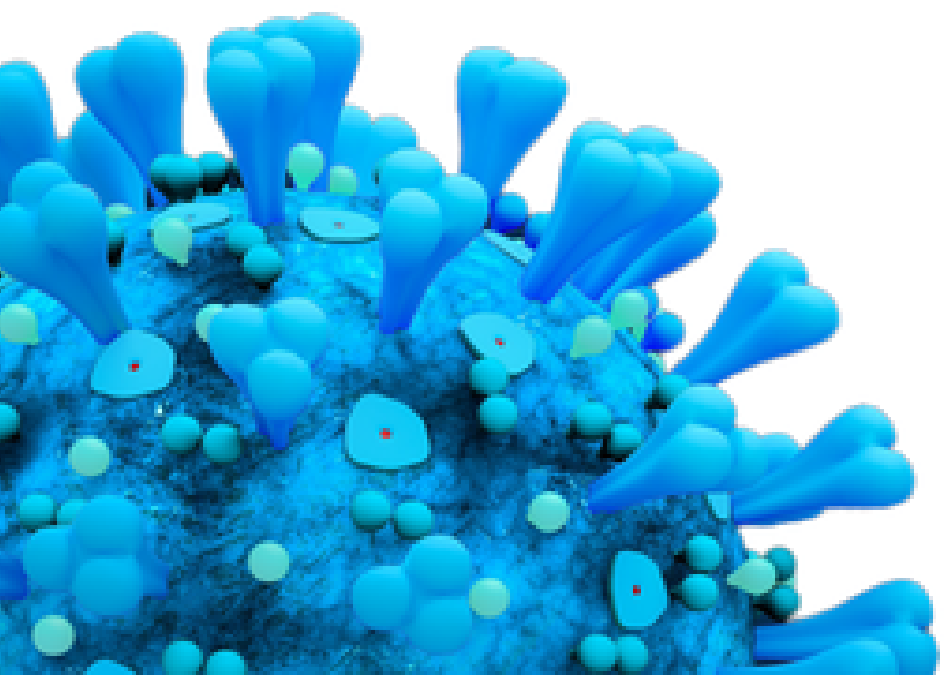

The project utilized various tools to collect, manage, and analyze the data.

Two primary tools used in the project were Pandas and Power BI.

Pandas is a Python library used for data manipulation and analysis

Power BI used to create interactive reports and dashboards that summarize and visualize the project data.

Global Data of COVID-19 Cases

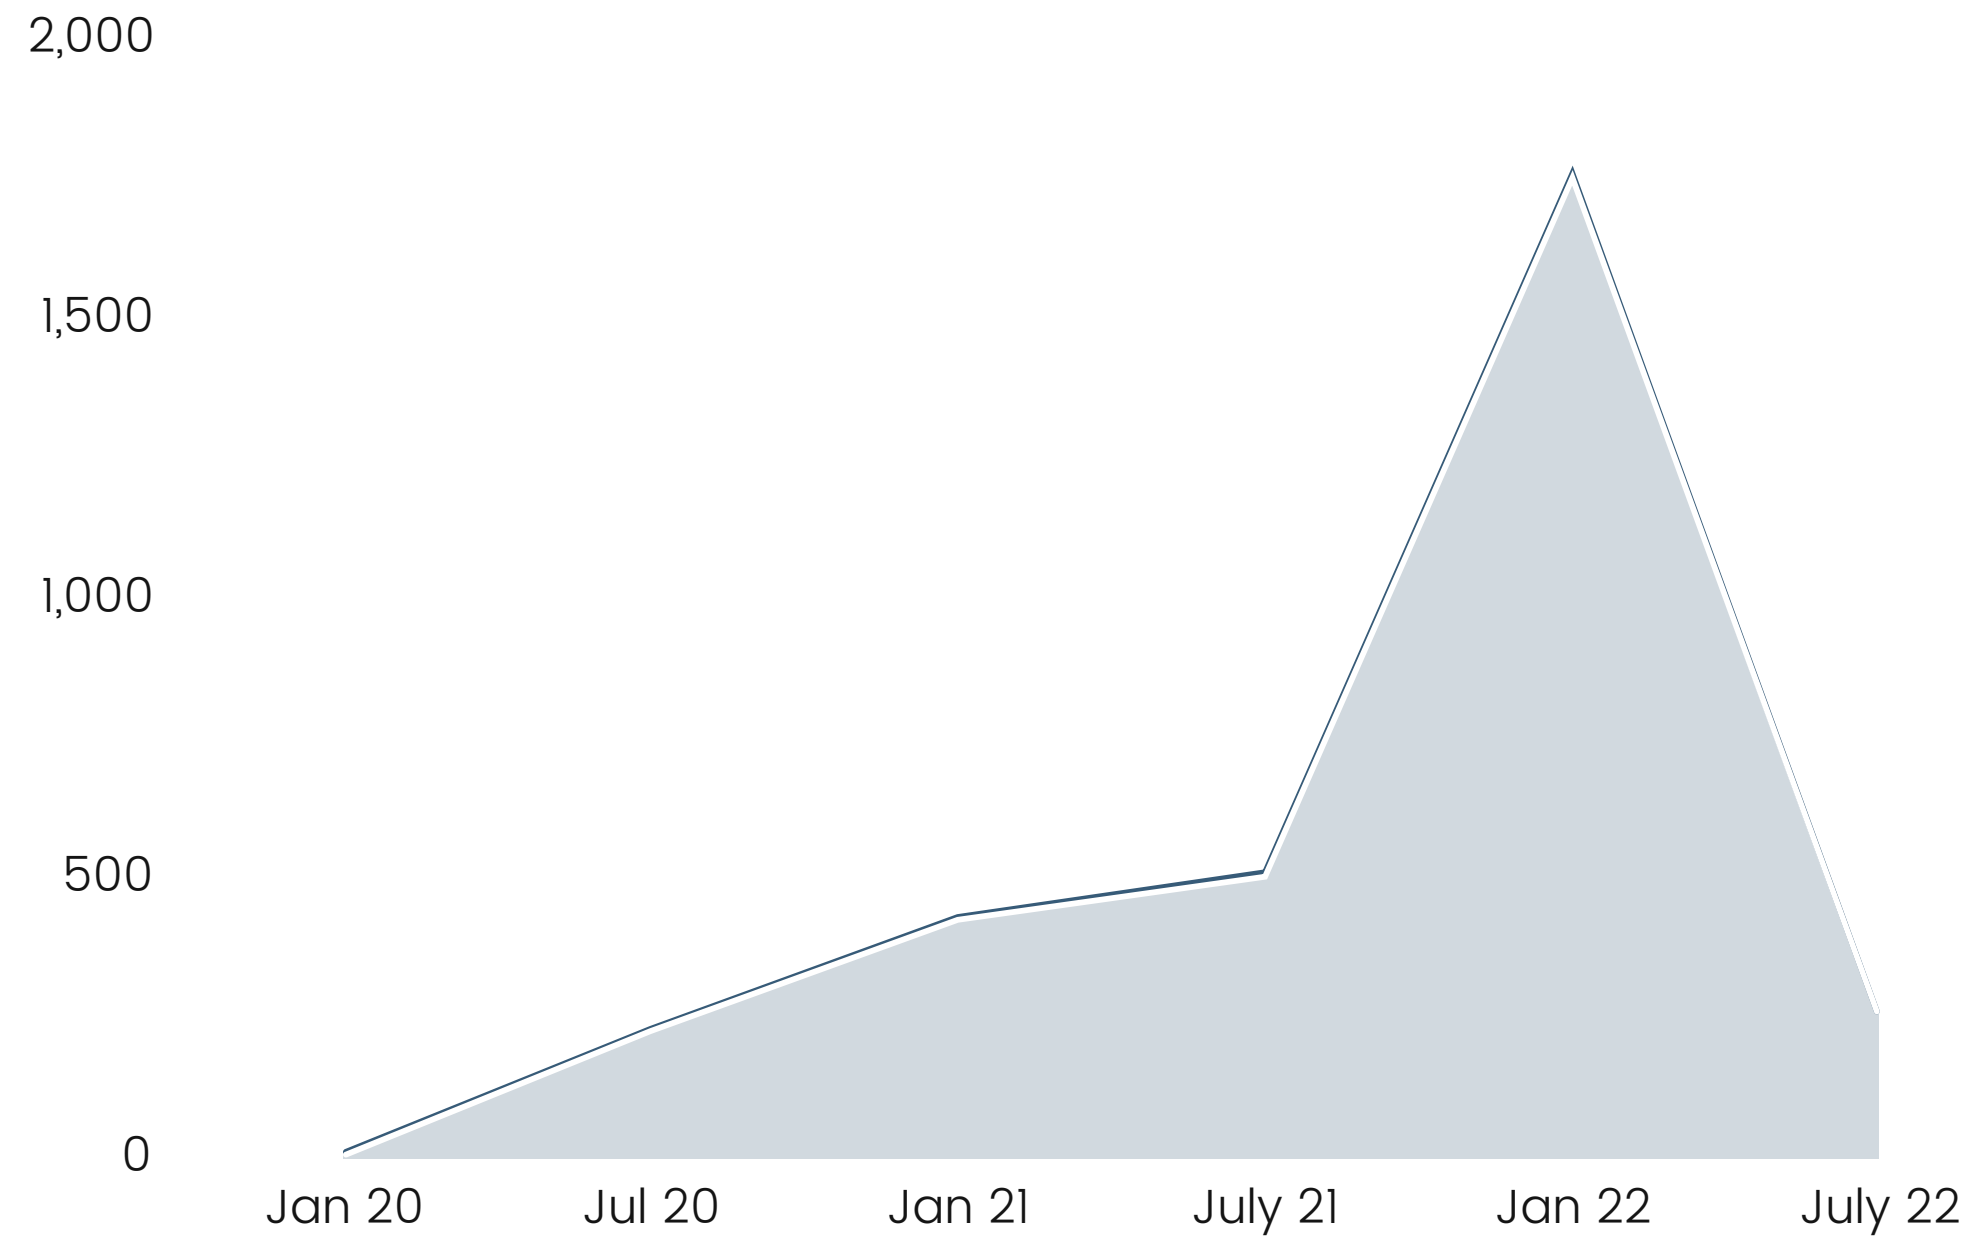

Total Covid-19 Cases

From Jan 2020

As of May 2022

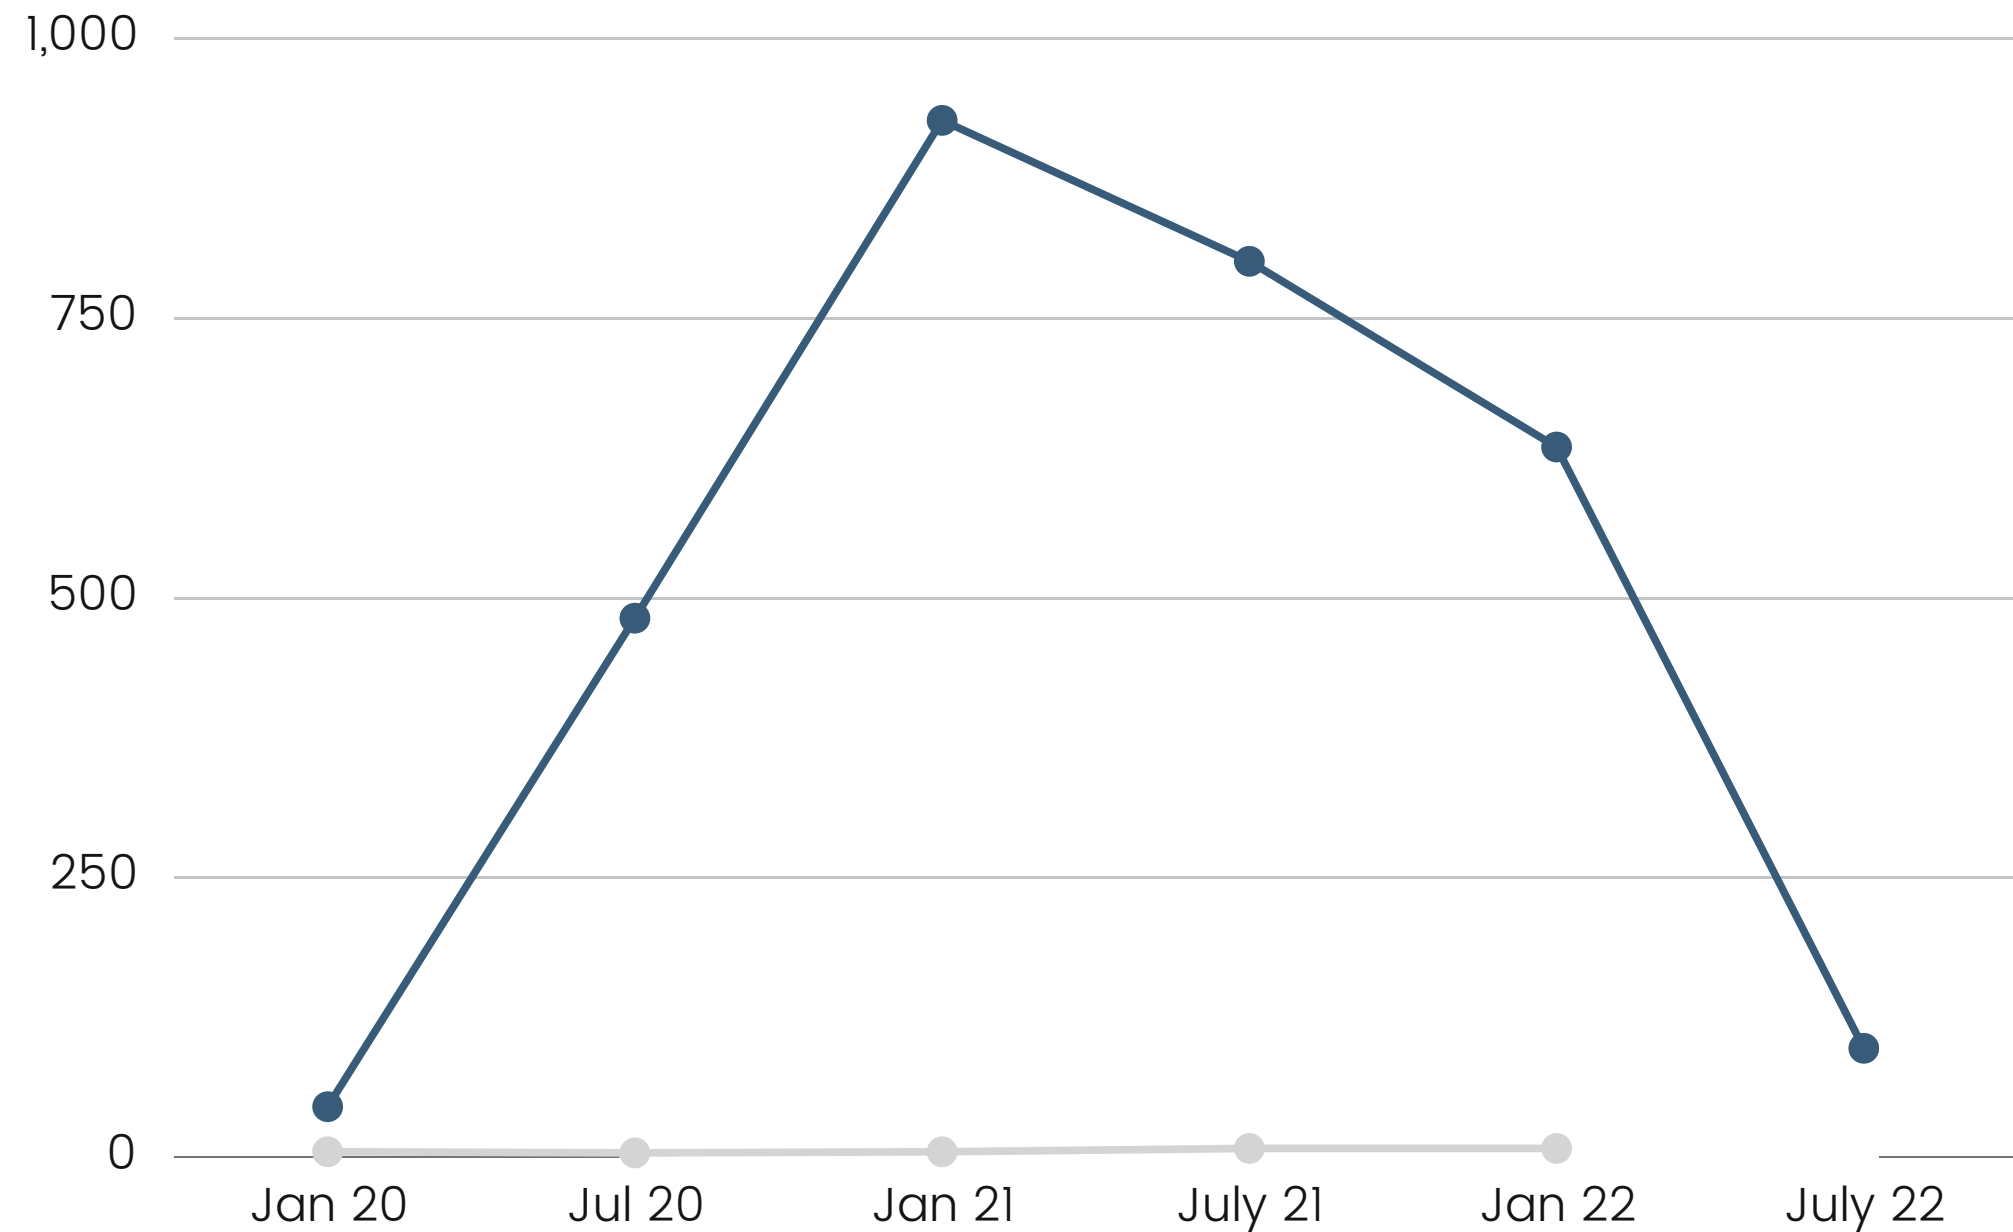

Total Covid-19 virus cases across
countries and cities.

Total Covid-19 Deaths

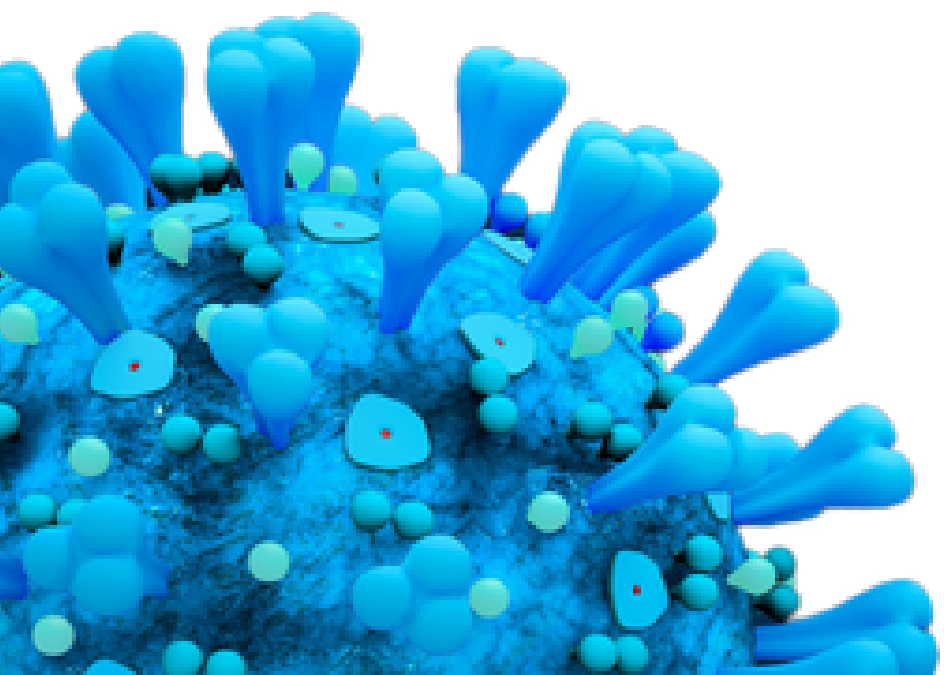

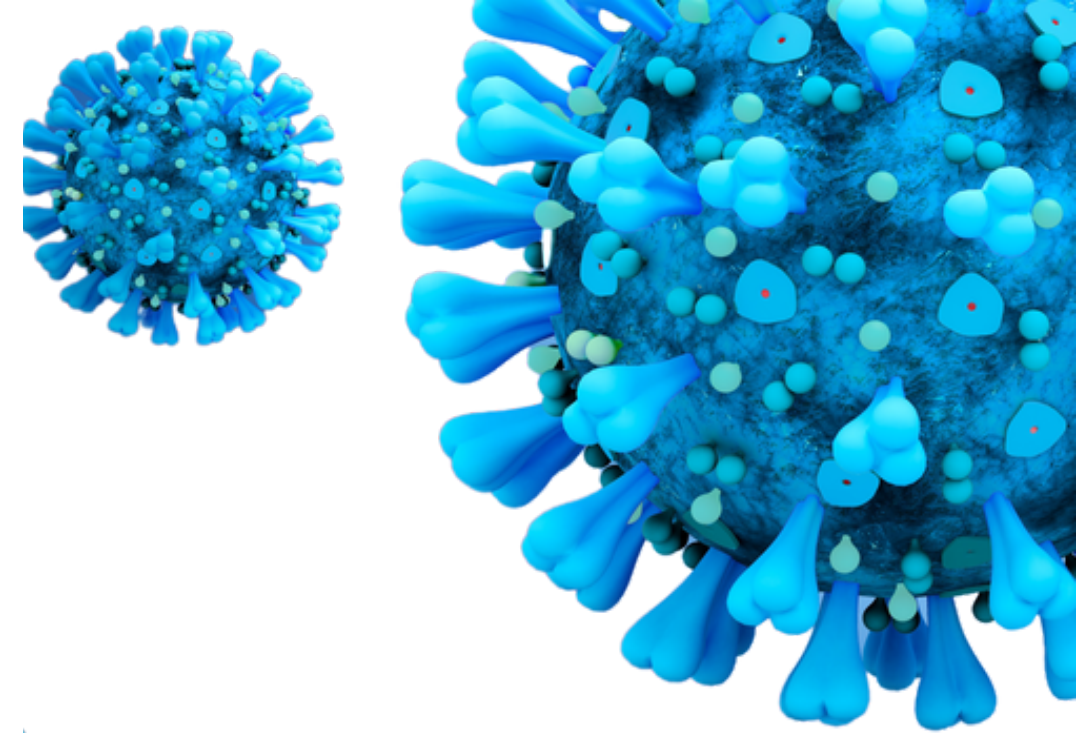

From Jan 2020
As of May 2022

Total deaths due to Covid-19 virus
across
countries and cities.

Conclusions :

Here are some key points that can be included in the conclusion of a COVID-19 project that analyzes cases, deaths, and active cases country-wise and overall:

- The COVID-19 pandemic has affected every corner of the globe, resulting in millions of cases and deaths worldwide
- Our analysis showed that the top five countries with the highest total number of cases were USA, India, Brazil, France and Germany
- The top five countries with the highest number of deaths were USA, Brazil, India, Russia and Mexico
- While the pandemic has impacted every country, the severity of the outbreak varies greatly between regions and countries, with some areas being hit harder than others.
